Coverage for Dental Implants

*Through Delta Dental of Wisconsin, dental implants are standard.**

Having implants as part of the standard prosthetic coverage gives dentists and patients another option when evaluating which procedure best fits an individual's needs. The condition of a patient's mouth, medical history, supporting jaw bones, and the way teeth fit together are important factors in the decision.

We believe dentists should be able to recommend the most appropriate options for treatment without regard to a patient's dental coverage.

Implants:

- Allow replacement of a single missing tooth without the need to crown adjacent teeth, as is done with traditional bridges.
- Generally feel more natural and comfortable than traditional partial dentures or dentures when multiple teeth are replaced.
- Have a five-year success rate greater than 90%, according to the latest research.

*Premium adjustment may apply. Contact your insurance professional for details.
