

Dental Implants

Dental implants are now eligible for benefits under your group dental plan. The main advantage of implants is that they allow for replacing a single missing tooth without the need to crown adjacent teeth, as is done with traditional bridges. Implants integrate with the jawbone, providing more stable and secure support for replacement teeth. Where multiple teeth are replaced, they generally feel more natural and comfortable than traditional partial dentures or dentures.

Are Implants Right For You?

Your dentist can evaluate whether or not implants are right for you. The condition of your mouth, your medical history, the supporting bone in your jaws and the way your teeth fit together are all important factors to consider. You can also learn more about implants at Delta Dental's website. Go to www.deltadentalwi.com/implants.
